

Ezi Bollards

Ezi Security manufacture its products where we are able to guarantee optimum quality control
Ezi Security specialises in the manufacturing, sales, installations and servicing of physical barrier systems to our exacting standards

Fixed Bollards

Fixed bollards are designed to deter access from vehicles to designated areas. And while the majority of fixed bollards have little or no impact rating, they are commonly utilised to facilitate traffic calming by the creation of chicanes and traffic tunnels.

Bollards are designed and quite useful for the physical protection of access control equipment pedestals, camera posts, buildings, gate towers and end posts from accidental slow speed vehicle collisions.

As an original equipment manufacturer, Ezi Security Systems produces a wide range of protective bollards designed for both industrial and domestic applications. You may select varying finishes to your bollards from our traditional high visibility safety yellow powder coat version to hot dip galvanised or even high quality marine rated stainless steel.

Bollard accessories such as your corporate logo, chain linkages, reflective stripes and traffic control & safety signage are able to mixed and matched to suit individual client requirements. The Ezi bollard is designed for either in-ground or base plate mounted

applications with variable wall thickness (up to 10mm); bollard diameter and erected heights from 900mm to 1200mm are also available to suit your needs and indeed your risks.

Standard & Typical Construction

250mm diameter round pipe, 5mm wall thickness.

1000mm Height, flange mounted.

Optional, concrete filled to 30 MPA. Quality zinc or stainless steel hilti bolts/fasteners to optional chemset with high tensile threaded rod.

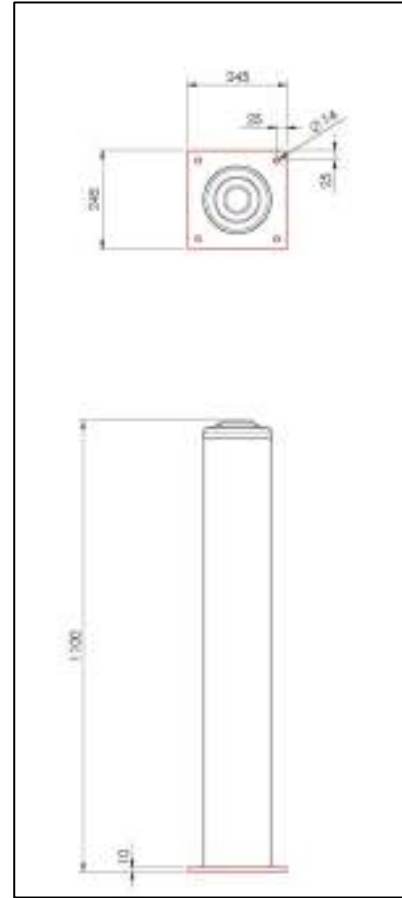

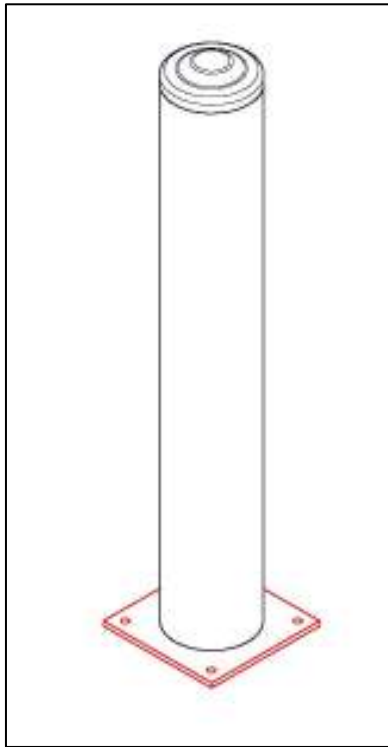

Impact Resistant Bollards

Ezi security has designed a range of fixed bollards that have been designed to meet estimated vehicle impacts of up to 2.5 tonnes at 35km per hour.

As Ezi Security is industry experts in perimeter security design, our skilled staff can design your entry/exit portals to enhance protection and reduce your individual site risks. Please feel free to contact our friendly technical sales staff in your state to arrange your no obligation site evaluation.
