CLAW

Mobile vehicle security barrier - tested and certified.

More enjoyment with peace of mind

When it comes to staging events, one of the recurring and fundamental problems is how to effectively and easily secure critical areas from hostile vehicles. And with that, how to protect every single person attending the event. In recent years, there has been a worldwide increase in incidents involving vehicles driving into people, whether as (un)intentional road accidents or terrorist attacks. This has sparked a discussion on the security of public areas and events.

CLAW is a mobile, heavy-duty vehicle security barrier that provides effective protection for a wide variety of areas, terrains and access roads. Cost-efficient, flexible in terms of time and location.

Protected with tested security

The CLAW mobile and preventive vehicle security barrier was developed in-house to protect events, Christmas markets, fairs, festivals and other sensitive public areas from unauthorised vehicle access. Crash tests under real conditions at accredited testing institutes provide an optimum basis for effective vehicle security barriers. CLAW has been rated and certified according to the international standards BSI PAS68:2013 and IWA-14-1:2013.

CLAW is certified as a single module. Unlike many other barriers, it is not necessary to connect several modules. This means that escape routes can be designed flexibly.

Security that is versatile and inconspicuous

CLAW can also be used as a reliable advertising partner. Optional banners can be attached to provide profitable or functional signage or advertising space. The banners can be printed individually on both sides and have an advertising space of approx. 6 m².

Using this design option, the vehicle barrier helps to create a familiar environment and will also appear less threatening. We will happily advise you on any questions you may have regarding this eye-catching advertising banner.

Effective • Safe

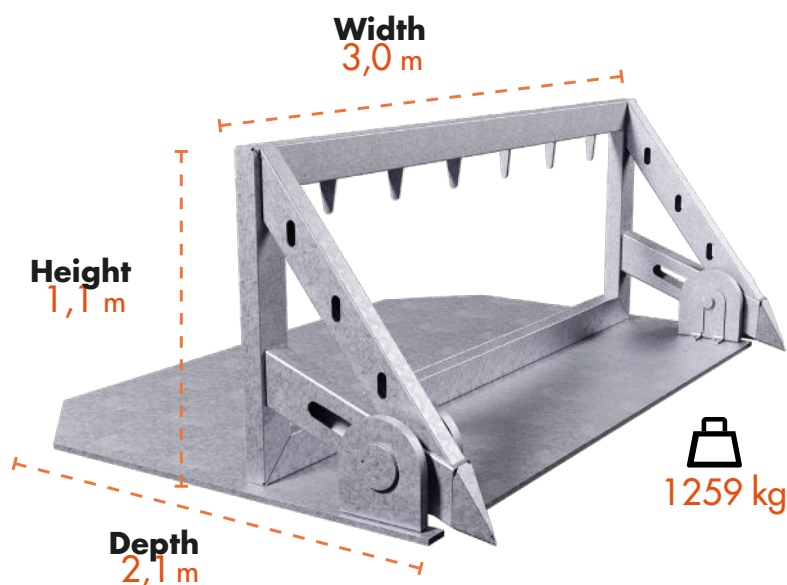

Benefits

- Zero tampering possibilities
- Ready for use immediately
- Performance guarantee without the need for guarding or supervision during the event
- Secure and vandalism proof
- Individual banner design according to customer requirements
- Fast and uncomplicated installation without the need for any construction work
- Available to purchase or hire
- Can be used all year round without any subsequent costs or need for maintenance

Technical details:

The barrier can be set up in minutes, is modular and provides protection against many different scenarios in a very short time. There is no need for assembly or anchoring.
